

# CHE BULLETIN NEWS

April 2010 / Vol 20 / Issue 1

Size Reduction application is getting more and more common in the processing industries especially for those companies require To enhance produce premium quality products . CHE understand very well about the needs of the individual companies and hence we are now partnering with a popular brand from United States , Fitzpatrick to provide value added services to our customers . Just a sneak about the company . The Fitzpatrick Company is recognized as a global leader in process technology. For six decades they have maintained this premier position by staying committed to innovation and by consistently exceeding customer expectations.

For over 65 years the history of the Fitzpatrick Company has been one of technological evolution in the design and manufacture of size reduction, roll- compaction, pre-breaking, and drying equipment.

Creating equipment with expanded capabilities and inventing new processing methods are among the goals of Fitzpatrick Research and development. These activities have led us to explore areas as diverse as microwave vacuum drying, inert processing, fine particle sizing, product containment, pulp processing and fluid bed processing. To support our commitment to innovation, we maintain a development area dedicated exclusively to testing prototype equipment and new processing techniques. Fitzpatrick actively seeks opportunities to work with customers and other partners to develop solutions to processing problems, making the seemingly impossible, possible.

CHE will continue to serve all their clients with full commitment and with the current business collaboration with our partner from the States, we will sure be able to improve our services to all our clients within the region.
