ASME 'U' & 'R' Stamp Certification

CHE is now a certified ASME 'U' & 'R' Stamp Holder !

2011 is a remarkable year for CHE and also a very good news to some of our customers who longed waiting for our fabrication yard to be certified with ASME International Pressure Vessel Fabrication , authorised 'U' & 'R' Stamp holder. After years of ground work and process capabilities enhancement, CHE team have finally made it!

ASME Certified Workshop

With this internationally recognised certification, we have another new challenge ahead, to compete with International market. This challenge will also help to groom CHE to another level . With our total 120 workforces, integrated operational management system, utilisation of advanced machineries such as High Definition 3 Dimensional Auto Plasma profile cutter capable of cutting Carbon Steel Material as thick as 150mm, Orbital Weld, Semi Auto Welding and lots more will enable CHE to serve the industries with full confidence and quality assurance. Intensive capital investment once again prove to our customers of committed continuous improvement and total awareness in quality.

Being a 'feather-weight' player in the Pressure Vessels fabrication market, CHE can still punch like a 'heavy weight' sometimes and therefore we shall continue to remain active in the industries to prove our capabilities.

For the past 2 decades serving the industries, most of our order are being recommended and we do not do marketing and therefore still majority of potential customers out there do not know about us. We will continue to expand our marketing effort to reach out to those who need a reliable and committed fabrication source.
